

Altering the Price of Unpaid Standard Permits

Introduction

Sometimes it may be necessary to change the price of a standard permit before it has been paid for and processed.

In paid permits, this process requires the existing payment be adjusted. Before the permit has been paid, the change can be made directly to the permit reservation.

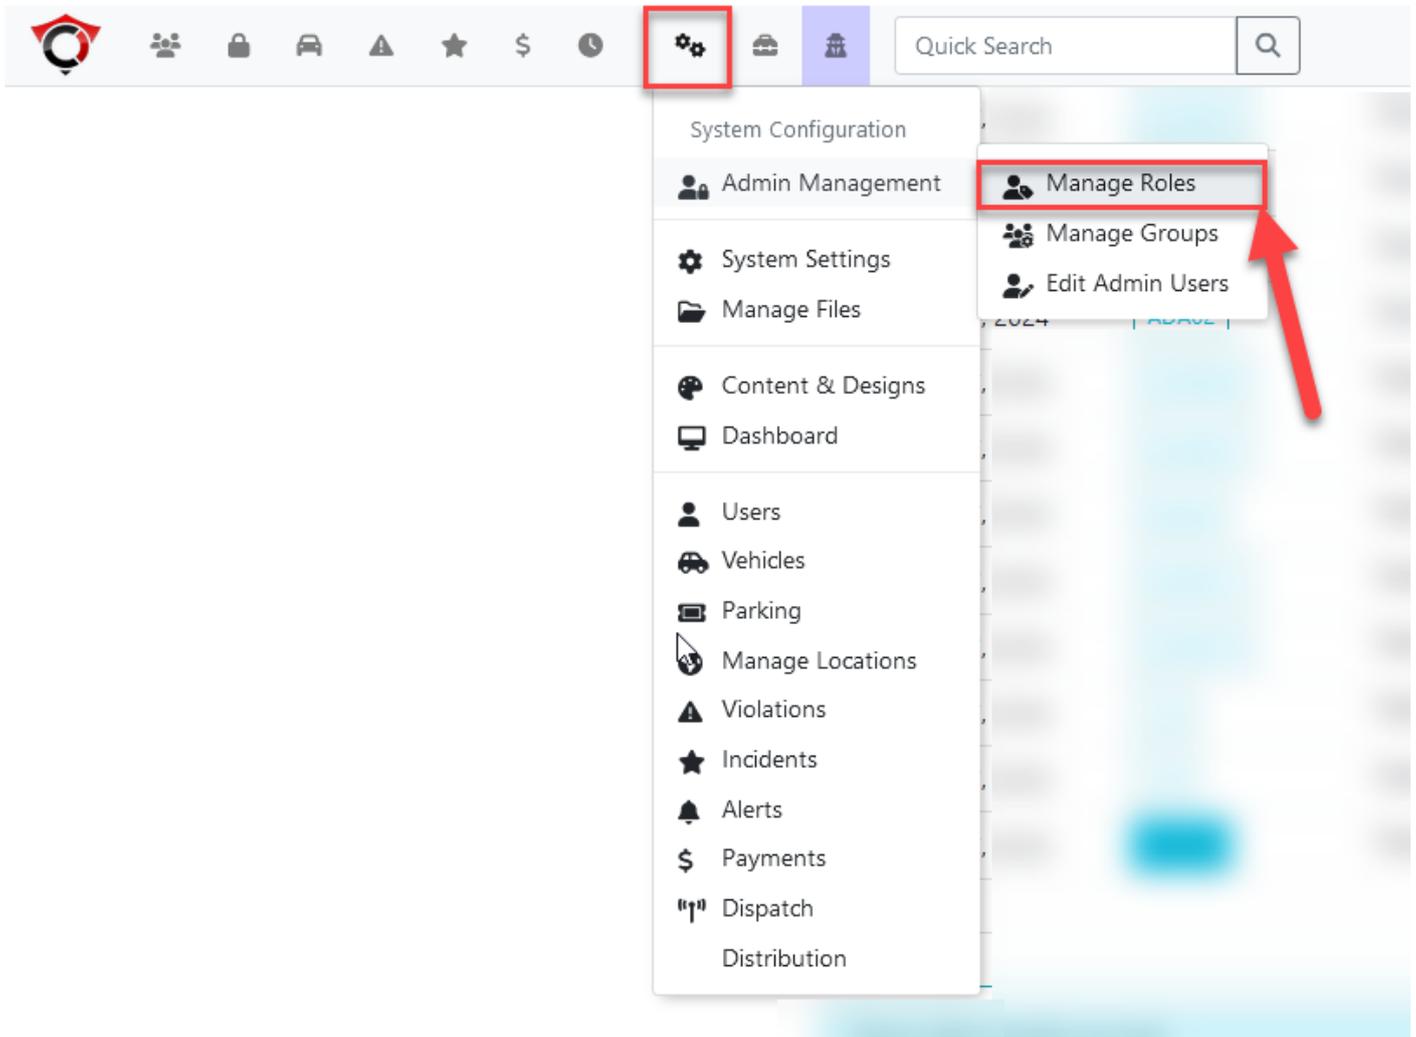

Changes made to the price of an unpaid permit will only affect the single booking for the current user. The general price of the permit will not be affected, and the next user who books the permit will have the default price assigned to their booking.

Permissions

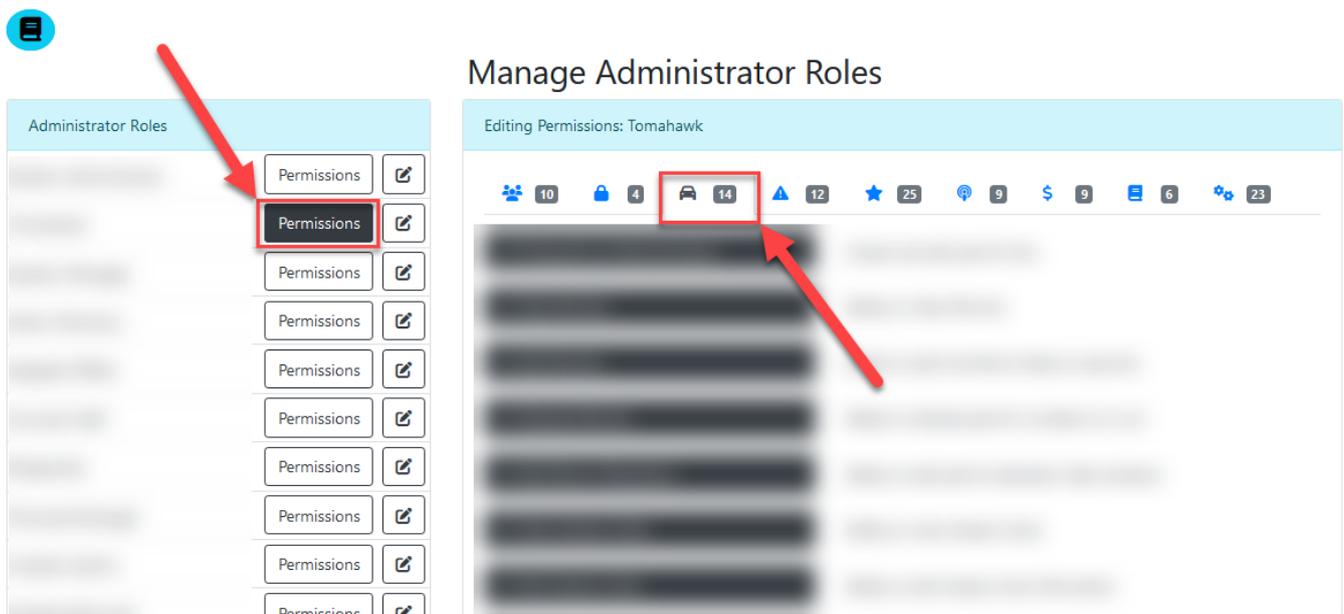

For an admin to have the option to alter the price of an unpaid permit, they must have the proper permission enabled for their account.

Find the admin permissions page under the menu tree:

- **System Configuration -> Admin Management -> Manage Roles**

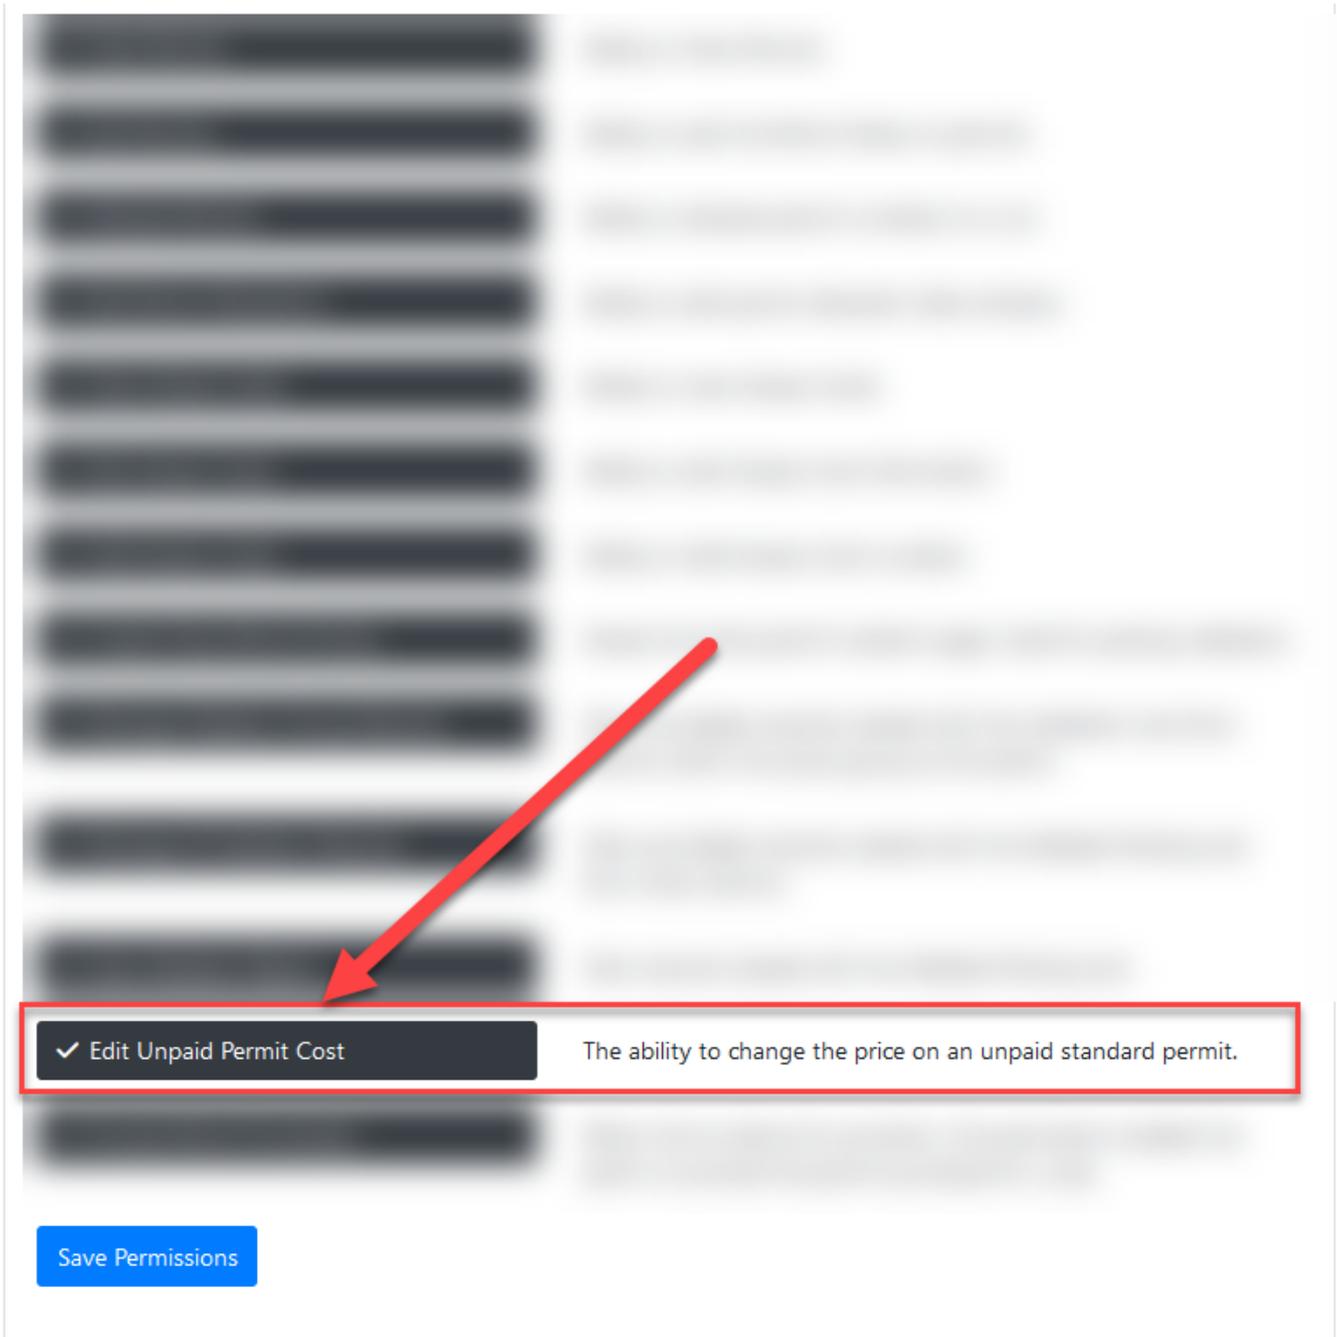

Open the permissions list for the admin type, and click the third menu option (with the vehicle).

The permission will be found near the bottom of the list.

It is called **Edit Unpaid Permit Cost**.

Admins with this role will now be able to edit the price of unpaid standard permits.

Editing Permit Prices

Once the admin has the permission enabled, unpaid permits can be edited from two locations:

- Directly on the permit reservation page.
- From the permit info page.

Permit Reservation Page

When booking a permit for a user, admins with the permission enabled will see an edit cost button next to the permit cost.
