We do need to know if billing address needs to be supplied (AVS or other security options are enabled). That changes what we prompt for.

What they use for settings

## Checkout type

Select the following checkout configuration type:

The screenshot shows the 'Moneris Checkout Configuration' page. The left sidebar contains a menu with the following items: Directpost Config, Hosted Paypage Config, Hosted Tokenization, Moneris Checkout Config (highlighted), Add User, Modify User, Audit Logs, Notification, Store Settings, IP Access, Multi Store, Visa Checkout, Apple Pay, and Google Pay. The main content area is titled 'Moneris Checkout Configuration' and includes a 'Back to Checkout Configurations' link. Below this, the profile name 'MOC-SPO' is displayed with 'Edit Name' and 'Delete Profile' links. A section titled 'Checkout Type' contains two radio button options. The first option, 'Use Moneris Checkout for the complete set of online payment forms.', is unselected. The second option, 'I have my custom order form and want to use Moneris simply for payment processing.', is selected and highlighted with an orange box. An orange arrow points from a callout box labeled 'Edit relevant profile' to the selected option. The URL 'onfig/index.php' is visible in the bottom left corner.

## MOC-SPO

Edit Name | Delete Profile

### Checkout Type

☐ Use Moneris Checkout for the complete set of online payment forms.

Select this option if you want to use Moneris forms for order summary, payment, shipping details, and order confirmation.

☒ I have my custom order form and want to use Moneris simply for payment processing.

Select this option if you want to embed Moneris payment details within your own order form.

onfig/index.php

# Multi-Currency

---

## Multi-Currency

- ☒ Enable Multi-Currency
- ☒ Geo-Locate
- ☒ Bin Lookup
- ☒ Add All Currencies

[Edit Markup](#)

---

Note the following. If multi-currency is enabled recurring billing, gift cards, 3-DSecure 1.0 and Google Pay and not supported.

If Multi-Currency Pricing is enabled, the following features are not supported:

- Recurring Billing
- Gift Cards
- 3-DSecure 1.0
- Google PayTM

# Payment

Set the following parameters.

Payment

Accepted Digital Wallets

☐ Apple Pay

If you enable Apple Pay you acknowledge that you have read the [Moneris Terms of Use](#) and [Apple Terms of Use](#) and you agree to be bound by these terms.

☐ Google Pay

If you enable Google Pay you agree to the [Google Pay API Terms of Service](#)

Kount Website ID

Transaction Type

☒ Purchase

☐ Preauthorization

☐ Card Verification

☐ Tokenize Card

Transaction Limits ?

☐ Transaction Min (\$)

☐ Transaction Max (\$)

# Payment security options

It's up to the client to enable these options or not. Note the issue about 3D Secure and Multi-currency above.

## Transaction Type

Only development for purchase is coded for now.  
We do not tokenize the card either so that stays off.

## Branding and Design

The only setting think is important is setting "Enable Fullscreen" to Off.
