

# What does a refund look like in the system?

Locate the user profile for the user you want to refund for. Note: The top right-hand corner will always identify the name of the user that is being worked on. In our example we will refund **Permit #1** at **\$395.50** but keep in mind the process is identical for and refund such as Standard Permits, Temporary Permits, Locker rentals, violations etc.

# Refunding to Deal with a NSF Payment

When a payment is made and processed the item is considered paid for. If the payment fails to pass at the bank (NSF) you would need to perform a refund in order to remove the payment from the system.

#### Why do we refund a NSF Payment?

Refunding for a NSF payment is essentially a bookkeeping issue. For example, if a cheque is returned NSF, the admin must remove the payment from the system in a manner that shows the incoming cheque as a payment and the refund as the removal of the payment that in reality never happened due to the NSF payment.

After you process the refund, the Processed Payment Report for this transaction should show the payment on the report as well as the refund. This is normal as with any refund you will see the incoming payment and then the refund (outgoing) payment. These both need to be there to record the attempt to pay (for lack of a better term) which would show as income. Since the cheque bounced that income has to be removed from the OPS-COM system (system of record).

By doing the refund and processing it you essentially remove that payment from the system and you do so in accordance with typical book keeping entries. Be sure to process the refund with the same payment type (cheque) as the original payment attempt. This will make more sense to anyone doing your accounting. It is also very important to leave good clear notes to document the failed payment and the reason for the refund.
