

Choosing and Configuring Printers

Selecting a Bluetooth Printer

To begin navigate to the System Settings:

Access System Settings

Once in System Settings look for the following two items:

- Bluetooth print driver
- Bluetooth Printer

System Settings

Printer Settings

Bluetooth print driver (default: Star Micronics)

Bluetooth Printer
Bluetooth printer for printing

Characters per line (default: 50)

Lines Before Ticket (default: 4)
Blank lines before ticket data : 8

Lines per Ticket (default: 40)
Maximum number of lines per ticket : 40

Ticket Footer
This parking ticket is due within 14 days. Failure to settle this parking ticket will result in the account becoming delinquent and subject your vehicle to collections and/or towing.

Include Client Name ☐
Show the client name as first line of the print out

Include Dotted Header Line ☐
Show a dotted separator at the top of the print out

Include Warning Value ☐
Show the value of warnings on print out

Include Discount Line ☐
Show the discount value when one applies

Include \$0.00 Towing Charge ☐
Show a \$0.00 towing charge on print out

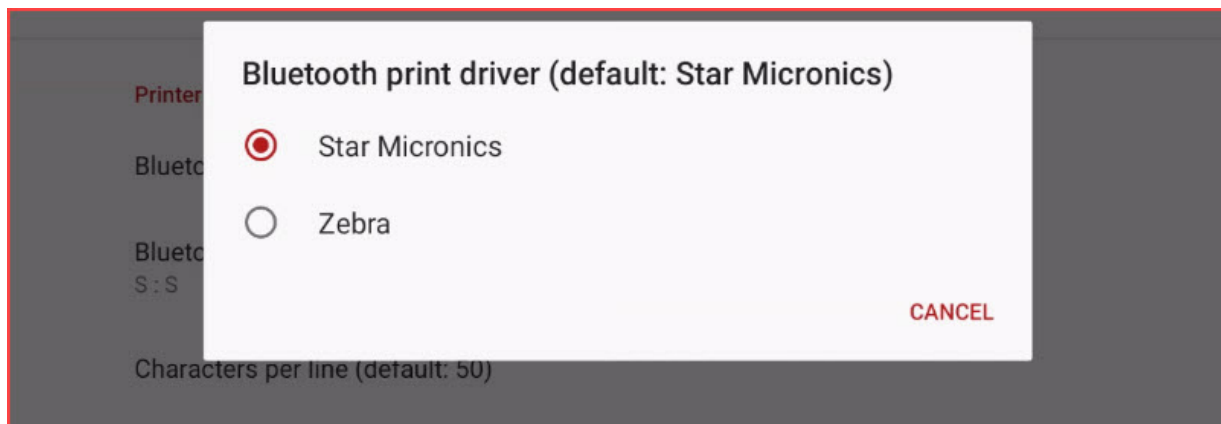

Include Bar Code ☐
Show the violation number bar code

Select the Printer

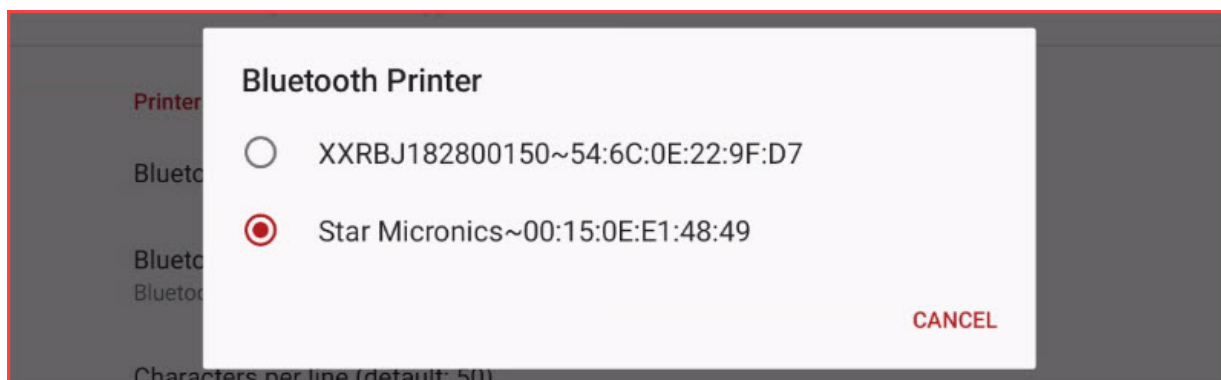

Tap on Bluetooth print driver to select the proper driver for the printer you are using.

By default the printer is set to Star Micronics. If you are using a Zebra printer, tap to select Zebra.

Selecting the driver will close the pop up and return to the main settings menu.

Click on Bluetooth Printer to select the printer you are using.

It is important that these two settings match as far as printer type.

If they do not match the printer will either not work or it will start to print odd code and characters.

Testing the Printer

It is always a good idea to issue a test violation to ensure that the printer is working as expected.
