# First Time Installation - Android

## Google Play Store Access

On the device Apps screen, locate the **Google Play Store** app.

Tap to open the app and search for **OperationsCommander** or **OPSCOM**

Tap the **icon** to begin the install process.

# Install the OPS-COM Application

The following window opens, tap the **Install** button.

This settings window will pop up to allow access to integrated apps on the handheld device.

Tap **Accept.**

Once the app has installed the screen will refresh with the following:

A pop-up will appear when the shortcut is created.

# Launch the Application

To launch the application, use the **Open** button, or go to the device's main screen and start the app from the shortcut.

# Application UUID

On first launch of the application a message will pop up saying the device is not registered; The message will include a UUID number.

# Permission to Use the Software

To use this software, your user profile must have the "Add New Violation" permission under Violations Permissions.

If your account login does not work, please contact the OPS-COM high-level administrator for your organization.

Your application admin will ensure your user account has been given the appropriate permissions to use the handheld devices.
