

Issuing a Plate Violation

Issuing Violations by Plate

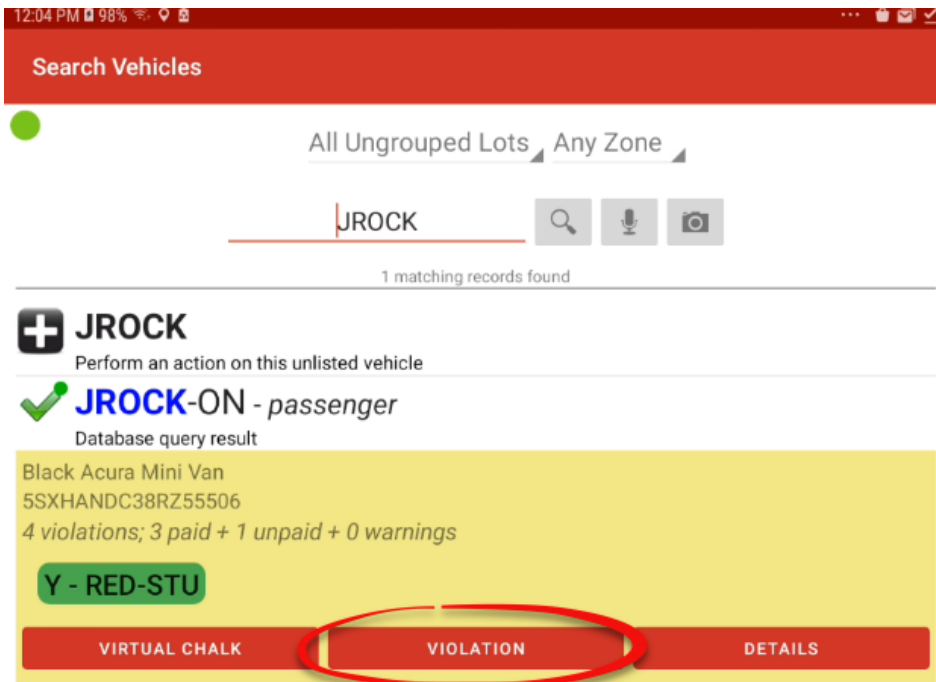

When logged into OPS-COM for Android, tap on the **Search Vehicle** menu.

After entering the plate number by OCR, voice or typing, the screen refreshes with a list of possible plate numbers.

Note: The red x indicating this vehicle is in violation and the + indicates that the plate isn't in the system yet.

After searching the vehicle tap the plate that is in violation which will give you more options to perform on it such as chalking, violations, details and more.

This will take you to the **Add Violation Record** screen where you can add the vehicle details as well as add any images associated with the violation. If the user has a DNTT or valid permit then a warning message will appear before allowing you to write the violation.

If the plate is known in the system then the vehicle information will be automatically completed and you can save or save & print the ticket.

- Tap the Select Offence Location. A drop-down menu appears for you to select the appropriate response.
- Tap to select an Offence Type, and a drop-down menu appears for you to choose the appropriate response. To change the fee from the default amount decided by the offence types you can select the fee amount.

- Tap on Towing Fee to add one if required. The cursor blinks to indicate you are in input mode. Enter an amount.
- Take pictures for proof in case of a dispute.

For an example of what the ticket would look like see **New Vehicle Violations**.

New Vehicle Violations

To issue a violation to an unknown vehicle you just need to make sure that you complete the vehicle information yourself. This will add them to the system the next time you sync your handheld.

Explanation of the Front of the Ticket/Warning

Ticket Number - This is a system assigned number that identifies each individual violation/warning.

Date - This is the date that the violation/warning was issued on.

Ticket Type - This identifies the type of violation that occurred (broad range category).

License Plate - This is the license plate number for the vehicle that incurred the violation.

Province - This is the province that the license plate is issued in.

Offense Type - This identifies the specific violation that occurred.

Location - This identifies the location where the violation occurred.

Writer - This is a system assigned number that identifies the enforcement officer that issued the violation. Each enforcement officer has their own unique number and can be verified by administrators. The writer is identified by a unique identifier to provide security to the enforcement officer. If you require more information about the ticket writer you can search the violation on the admin side and get an actual name for the person who wrote the ticket.

Fine - This is the amount owed for the particular violation. Note, on the warning ticket the amount is followed by "*Warning". This indicates that the amount on the ticket is not owing, but this is the amount that would be due if a ticket for the same violation was issued.

Towing - This is the amount due if the vehicle that incurred the violation had to be towed.

Comments - This section includes any additional notes that the enforcement officer wants to include.

Explanation of the Back of the Ticket/Warning

The back of the ticket provides details about the organization that issued the ticket and the policies and procedures regarding the ticket. The back ***clearly identifies how the violator can pay or appeal the ticket*** with a section for the violator to identify themselves and sign off on the ticket. The back also identifies where to find additional information on the organization and the office hours.

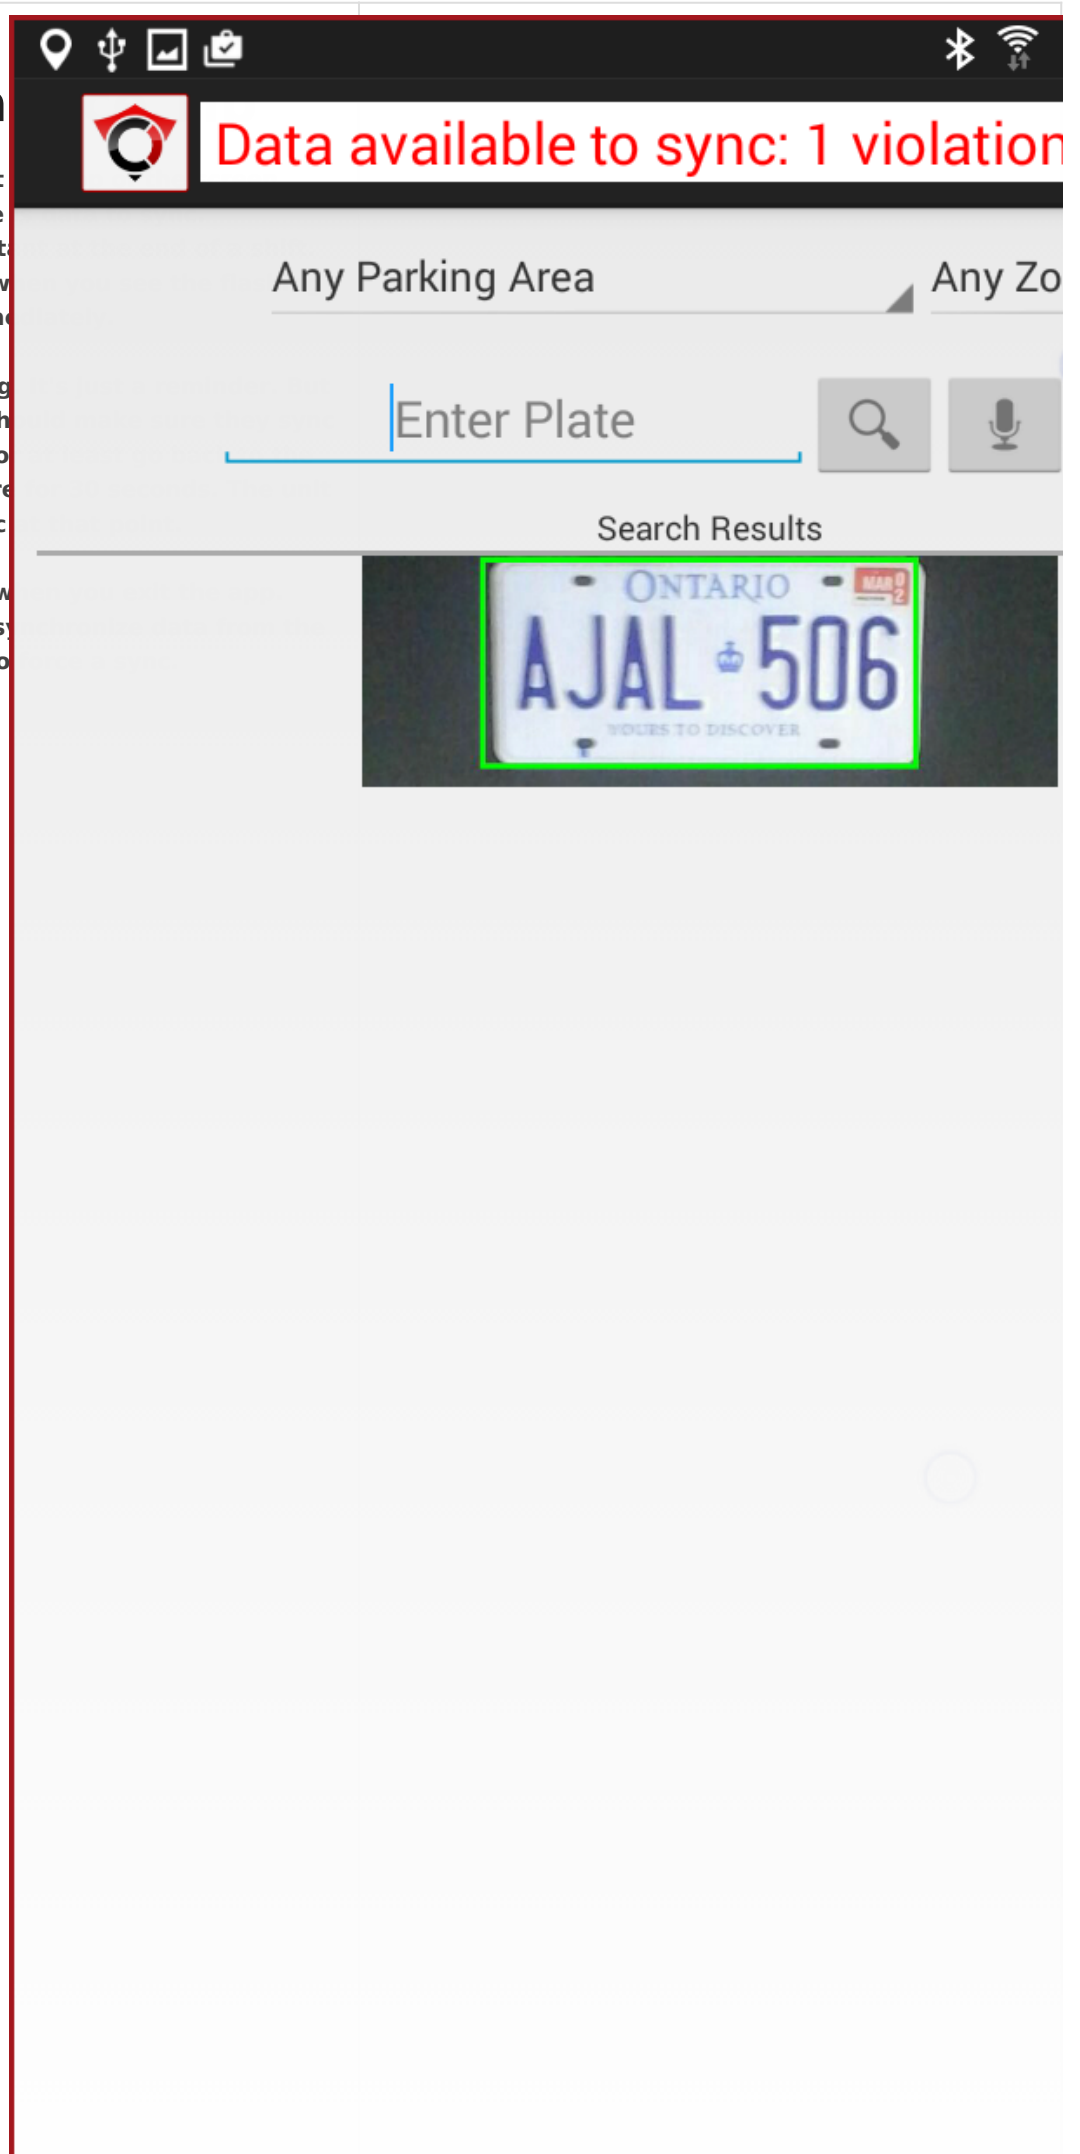

Important Note:

Best Practice

Note the reminder at the bottom of the screen indicating there is a violation. This is especially important if you don't have to sync with the server. The bar immediately disappears.

You can continue working if the bar is flashing, officers should not power down the device before powering down or returning to the main menu and stay there until the bar disappears. The bar will auto-sync with the server.

It will also auto-sync with the server. Officers can also select sync from the main menu to sync with the server.

Using Groups and Zones

Plate searching and vetting can be focused on using groups and zones.

When using virtual lots, you can specify groups and specific zones within the group.

For example, there may be parking available closer to a building that could be reserved for specific groups of people.

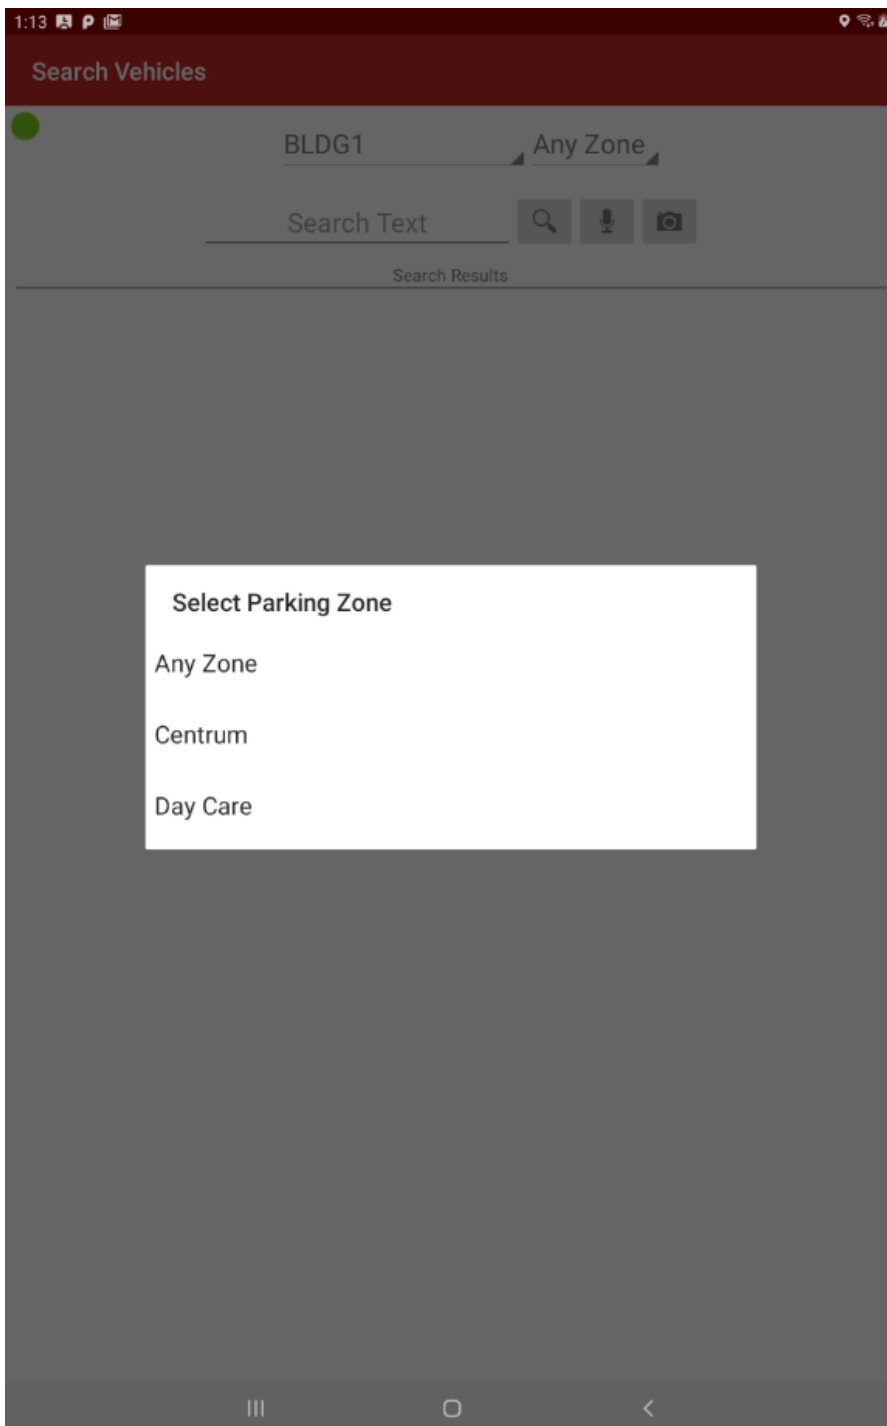

In our example Building, 1 has spots for **Day Care** parking.

Tap on **Any Parking Group** to access a list of groups. Here we select **BLDG1** for example.

Tap **Any Zone** to select the specific zone you are patrolling. In this example we are going to patrol the **Day Care** zone.

The following is an example of a vehicle permitted to use daycare parking after 12:00 pm.

With the handheld unit set up as described above the plate was scanned using the **LPR/OCR** functionality.

The **Green Check Mark** indicating the vehicle is permitted to park in the specified **Group and Zone**.

Tapping the vehicle and viewing the **Vehicle Details** shows you extended permit information.

Secondary Check On Permit Validity

When creating violations, the handheld units will perform a secondary check on the vehicle to alert the patrol officer if the plate has a valid permit.

In our example, the plate JROCK has a valid monthly permit in the Red Student Lot Yearly (Y-RED-

STU).

VIOLATION

DETAILS

If the officer proceeds to Issue a Violation the unit will issue a warning that the plate has a valid permit. It will still allow a violation to be created at the officer's discretion in the case that the violation is for something other than a valid permit.
