

Zebra Printer

Pairing the Printer

1. Go into the device settings and select **Connections**, then **Bluetooth**. The printer you are attempting to pair with should be listed as available. In this case we see the ZQ520BT printer is available.

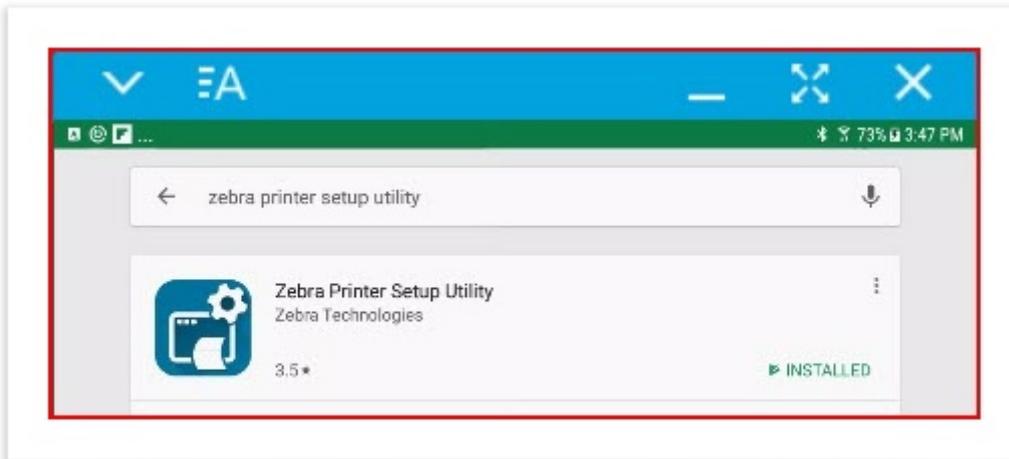

2. Tap the **printer name** to begin pairing. A number will appear on the printer screen as well as on the Android device. A message instructing you to ensure the numbers match will also appear. Tap the **check mark button** on the printer and then tap the message on the Android device. You will see a message indicating the pairing was successful. If not simple repeat the process.

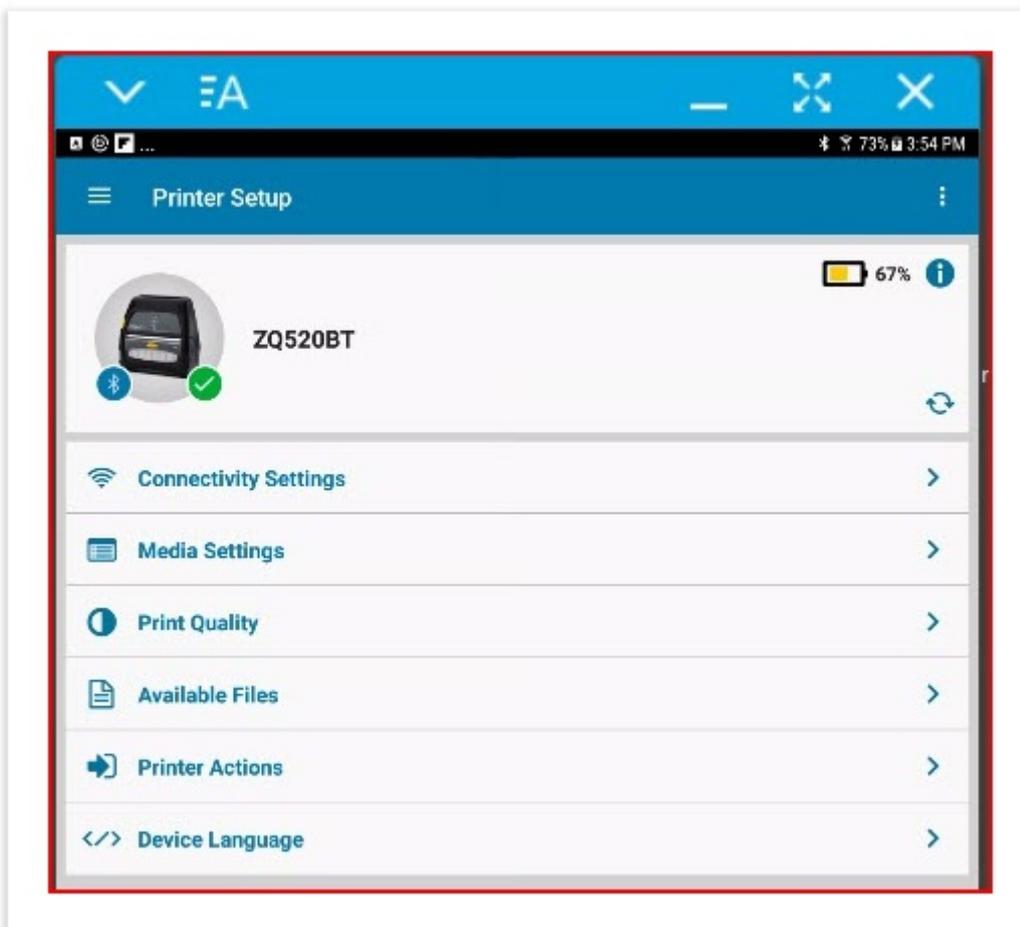

Setting up the Printer for Use

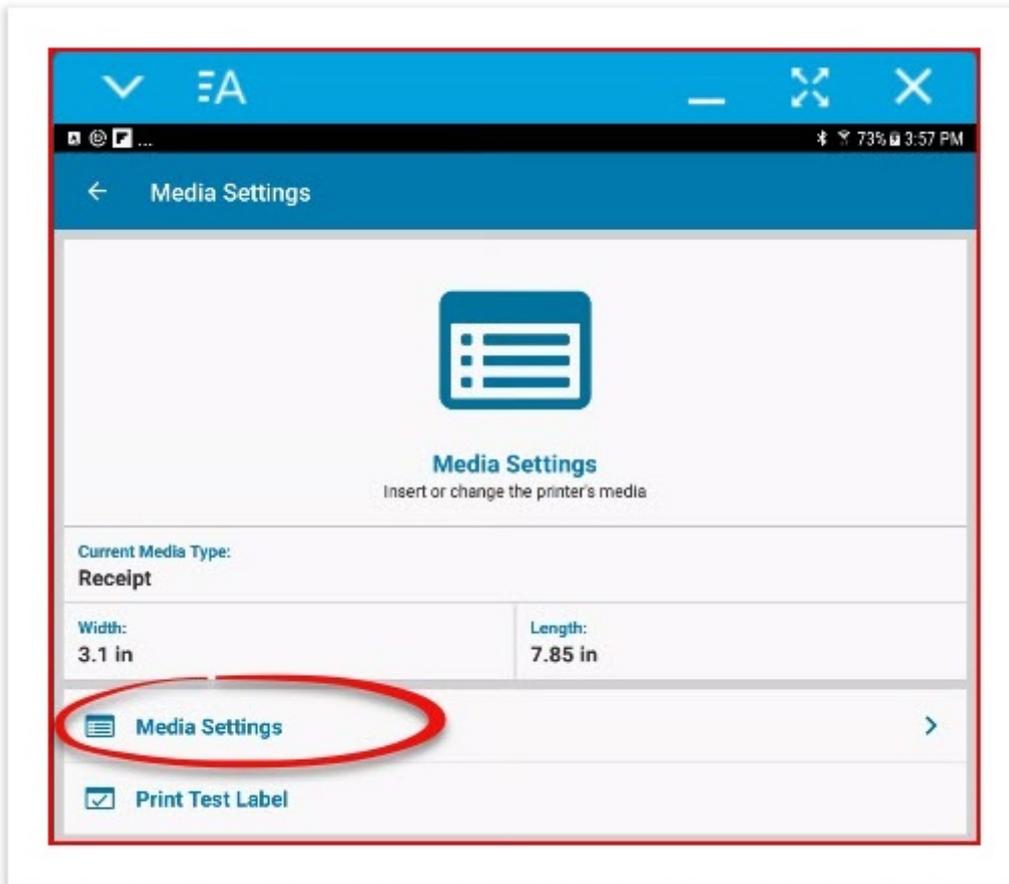

1. You must install the **Zebra Printer Setup Utility** from the Google Play store.

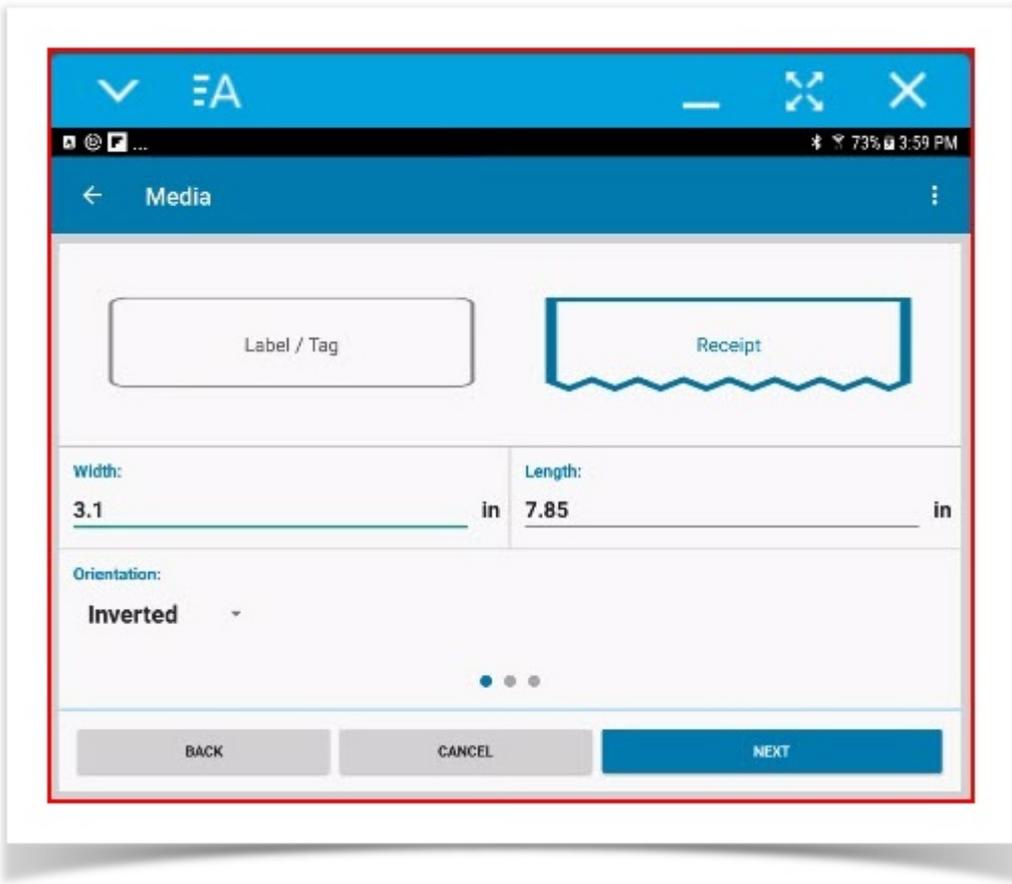

2. This utility will allow you to set up the configuration for the printer. (Media size, Orientation etc.)

3. Tap the **Media Settings** menu and then tap **Media Settings** again.

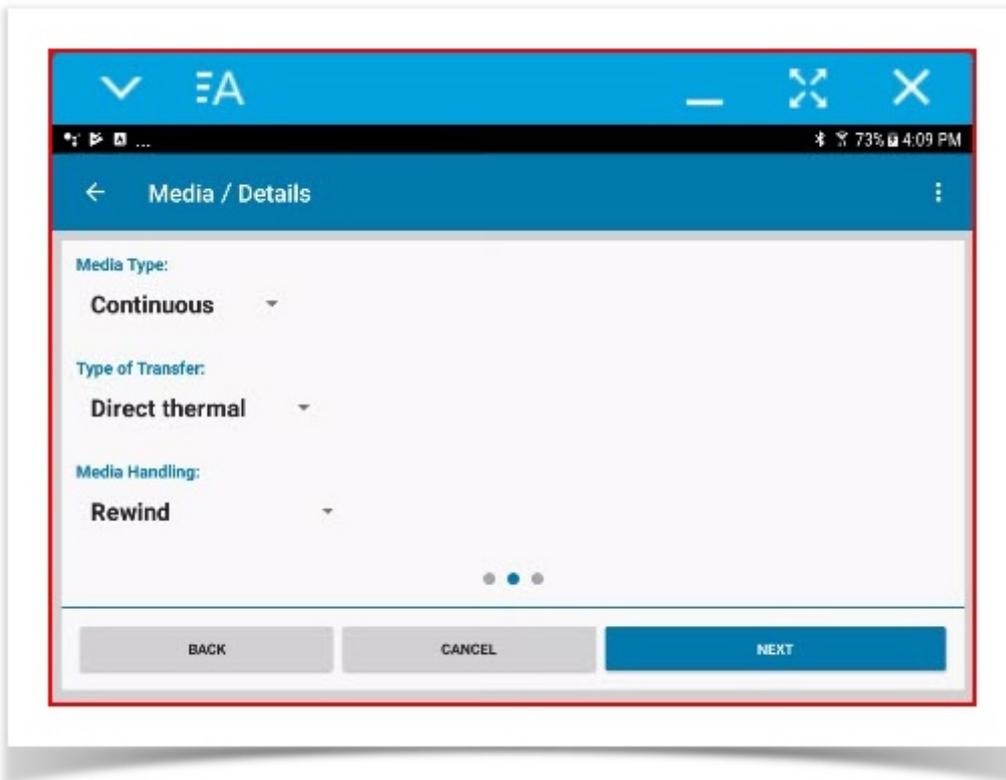

4. In Media settings we are setting up for a 3x7 printer roll. To do this enter the following:
- Set the format to Receipt
 - Set the width to 3.1
 - Set the Length to 7.85
 - Set the Orientation to Inverted

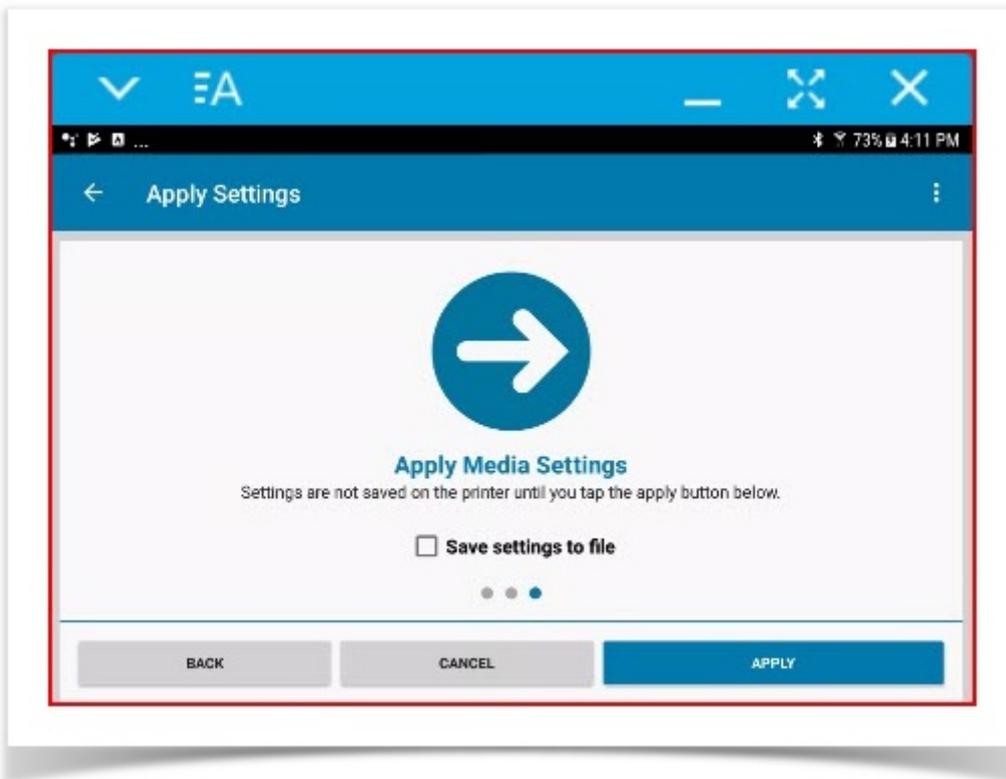

5. Tap **Next**.
6. Set the **Media Type** to *Continuous*.
7. Set The **Type of Transfer** to *Direct Thermal*.
8. Set The **Mobile Handling** to *Rewind*.

9. Tap **Next**

10. On the last screen tap **Apply**.

11. On the **Media Settings** screen tap **Print Test Label** to check that the print is centered and oriented properly.

12. You are now ready to select the printer from apps on the Android device.
