

Admin User Accounts

Creating an Admin Account

Hover over **System Config** and click **Edit Admin Users**.

The **Manage Administrator Users** screen displays. Select **Insert New User** from the drop-down menu, then click **Retrieve**.

On the left, you will enter the user information, and on the right, you will select the admin role(s) this person will be responsible for.

Comment

You can also click on the **Login Activity** button to see when the admin logged into the OPS-COM system or a handheld device.

Resetting an Admin's Password

To reset an admin's password go to the specific user's account and enter a temporary password into the Password field. The password is hidden but you can simply type over the existing symbols "*****".

Inform the admin of the temporary password. When they login with the temporary password they will be prompted to update their password and they will have the opportunity to make it more secure.

Disabling an Admin Account

When do we use this?

Admin users cannot be deleted as they have data attached to their accounts. If an admin user changes roles or leaves the organization the best practice is to disable their account.

NOTE: It is very important to leave the admin users permissions in place as the permissions will affect reporting. Obviously, once the account is disabled any permissions existing cannot be actioned and will only be used for reporting purposes.

Click on the **System Config** menu and choose **Edit Admin Users**.

ca

Click on the field labeled **Insert New User** to see a drop-down list of active users.
