

Lot Passwords

WIP

Added the ability to put a password lock on a lot to prevent users from booking a permit in that lot unless they know the password.

Lot Edit Page

- Added a toggle to enable/disable passwords
- Added an input for the lot password

Permit Reservation

- A middleware has been added to the reservation pages for permits on the user-side. When a lot is password-locked, users trying to access it will be forced to a password input. They will need to enter the password in order to be able to get to the permit reservation page.
- Once the password had been input, the user will not need to enter the password again for that single lot until their session data is cleared.
- Should only apply to the single lot the password was entered for. Other lots with passwords should still prompt the user for the password.
- Applies to:

- “
 - QR/Guest booking (this is only relevant to the real-time map, which uses the guest checkout)
 - Temp permit booking
 - Standard permit booking

Other

- When a lot has a password on it, a lock icon will appear next to the lot name in places where it appears.
 - This includes lots that appear on the real-time map.
 - Even if a lot has a password, the password will not be enforced unless the password use is enabled for that lot.
 - Passwords cannot be enabled for a lot when there is no password set for the lot.
 - Admins are not restricted by lot passwords on the admin-side, and will not need to enter the password to book a permit for a user
-
