

TouchNet (uPay) Hosted Payments

Credentials Required:

Your TouchNet Account Manager can provide you with the following information:

- **uPay Site ID:** Usually a 3 digit number for example 013
- **uPay:** A secure URL that uniquely identifies your account
- **T-Link web service:** Another secure URL that uniquely identifies your account

These credentials will be given to you for both a Sandbox (Test) and a Production (Live) environment.

Please provide these details to your OPS-COM Account Manager. Charges for setup may apply.

T-Link Web Service:

OperationsCommander's parent company Tomahawk Technologies is a [TouchNet ready partner](#). When configuring the T-Link in your TouchNet account you maybe asked to select a TouchNet ready partner from a dropdown, please select "Tomahawk Technologies".

If you don't have the ability to configure a T-Link web service URL and your TouchNet Account Manager hasn't supplied one, you may need to request TouchNet setup a "uPay" site for you which supports T-Link web services.

GL (General Ledger) Codes:

OperationsCommander's TouchNet integration currently supports multiple GL (General Ledger) codes. One code can be specified for parking permits, another for all other payments (violations, lockers, etc). The GL code can also be the same for all purchases. If using GL codes please let your OPS-COM Account Manage know the GL code name(s) you setup in your TouchNet account.
