Permit Misuse Notification

Setting up the Permit Misuse Timer

Select the **System Settings** menu item

Scroll to the **Advanced Settings** section of the settings, select **Permit Sharing and Misuse**

When you tap on Permit Sharing and Misuse Timer, a menu will open allowing you to choose the length of time the first vehicle capture will be "remembered" by the system. Once you set a time the function is turned on.

In our example the system will present a warning if the second vehicle is scanned within an hour of the first vehicle scan. After that point the first read is forgotten so to speak and the process starts over again.

Permit Misuse Alert

When you search for a vehicle that shares a permit with another that was recently seen, an alert will appear on the device to notify you of possible permit misuse.

The screenshot displays the 'Search Vehicles' interface. At the top, there are dropdown menus for 'Any Parking Group' and 'Any Zone'. Below these, the search term 'ADMN485' is entered in a search bar, accompanied by search, voice, and camera icons. A message indicates '1 matching records found'. The search results show a vehicle entry for 'ADMN485' with a plus icon and the text 'Perform an action on this unlisted vehicle'. Below this, a green checkmark icon is next to the text 'ADMN485-ON - passenger' and 'Database query result'. A yellow alert box contains the text 'potential permit misuse - BTZV831 was seen Aug-03 09:41', with a red arrow pointing to it. Below the alert box, the vehicle details are listed: 'Blue Nissan Hatchback' and 'No past violations'. A green badge with 'Y - TL1' is shown. At the bottom, there are three red buttons: 'VIRTUAL CHALK', 'VIOLATION', and 'DETAILS'.
