

Admin Dashboard Setup (Quick Start)

The OPSCOM Dashboard is a fully customizable, widget-based analytics dashboard built into the admin portal. Each user can create multiple personal dashboards, arrange widgets freely on a drag-and-drop grid, and configure each widget individually to show exactly the data they need. Dashboards and widgets automatically refresh on a configurable schedule and are fully responsive down to mobile widths.

Setup & Configuration

Configuring dashboard layouts requires specific [administrative permissions](#).

Dashboard layouts and widget configuration are now fully documented in our feature guide. For detailed instructions on available widgets, customization, and layout options, see the [Using the OPSCOM Dashboard & Widgets](#) article.
