## Violations From Static Cameras / Mailout Violations

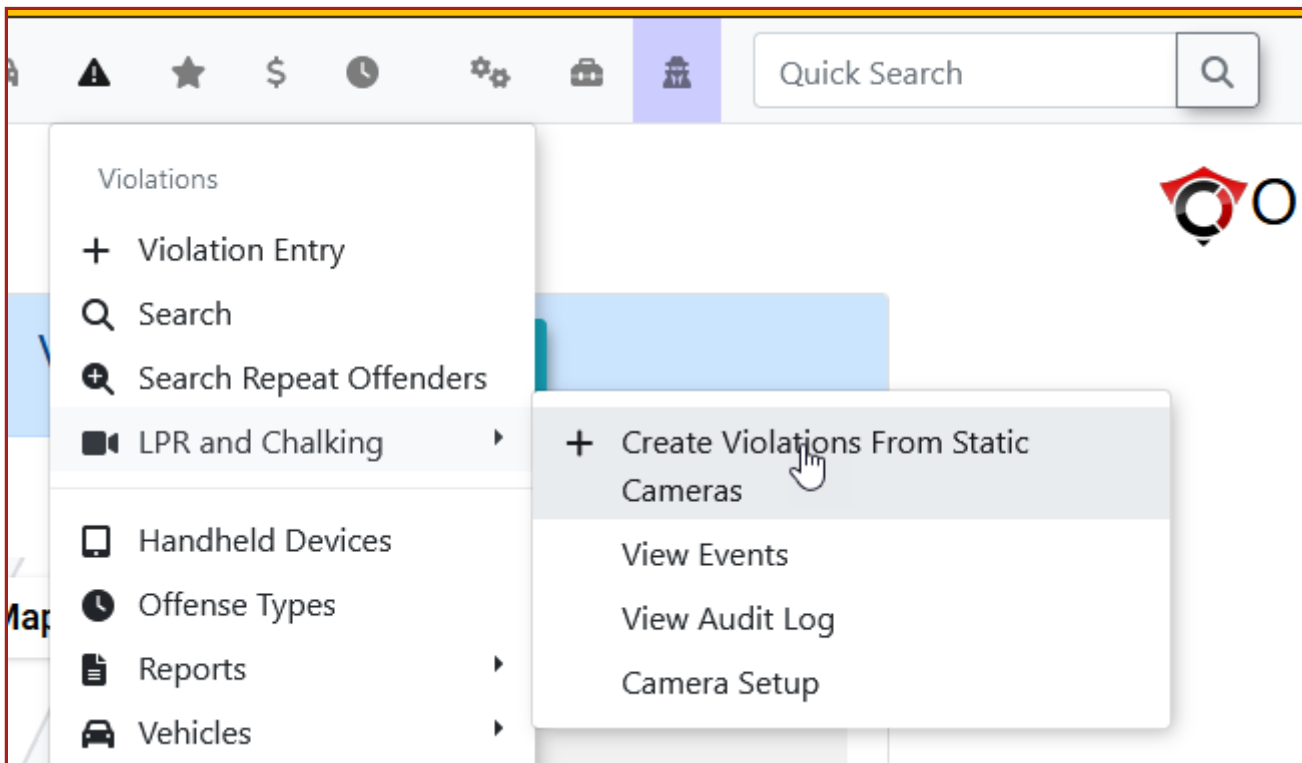

Violations/Infractions can be created from a report that looks at chalk records. Before this can work, ensure that OPSCOM has set your static cameras up with the necessary settings to report on the lot group and gps location of the camera. Some cameras report on more vehicle information than others. This can be helpful in the report later.

Note: If you would like to change the ticket prefix, (i.e. the TT- before the ticket in the default configuration) you will have to contact [OPSCOM support](#).

The next setup would be to map your Lot Groups to the appropriate Offence Location:

With this set up, logs will be available as they come in:
